SIT725 – Applied Software Engineering

Task 9.2P – Sprint 1 Review

1. Link to the MVP Video:

https://youtu.be/l66ygf29e8w

2. Our SRS remains unchanged since 7.3P

3.

Planned Sprint 1 tasks	Completed	In Progress	Cancelled/Moved to Sprint 2
Design Registration/Login Page UI	Х		
Develop Frontend Form (React + MaterializeCSS)	x		
Connect frontend to backend API	Х		
Make registration/login pages responsive	х		
Design MongoDB schema for Users, Recipes, Ingredients	х		
Setup MongoDB and test connection	Х		
Write a recipe seeding script	Х		
Setup Node.js project and routing	Х		
Create Home page layout	Х		
Add frontend form validation			Moved to Sprint 2
Test MongoDB CRUD operations			Moved to Sprint 2
Write project setup instructions			Moved to Sprint 2
Document APIs (register/login)			Moved to Sprint 2

Setup secure password hashing using bcrypt		Cancelled
Create backend API		
for user	X	
registration/login		
Develop admin		
script to manage	X	
users and recipes		
Test		
registration/login	X	
APIs with REST		

4. Individual Contribution

5. Name	Main Role/s	Target Grade
Dhananjay Choudhari	Frontend Developer, UI/UX Developer	С
Likith Somashekar	Backend Developer, Database Specialist	С
Utkarsh Aggarwal	Full Stack Developer, Scrum Master	С

Dhananjay Choudhari

Criteria	Pass -> "can do allocated work with guidance"	Credit -> "performs their role in the Project"	Distinction -> "can see themselves in the team and assist others"	High Distinction -> "can demonstrate excellence"
Core Development			Frontend Development for RemixMeals - Implement React.js SPA with responsive design using Materialize CSS - Develop reusable UI components with proper state management - Create user registration, login, and ingredient input interfaces following MVC architecture - Build recipe card displays components with feedback mechanism	
CRUD			Advanced CRUD operations including: - Data validation for user inputs - Input sanitization for ingredient entries - Form validation with proper error handling - Implement bulk update for user profiles	

	1	T		
Design			Frontend design contributions: - Create HI-FI mockups in Figma for all major screens - Develop clickable prototype demonstrating user flows - Design responsive interfaces for both desktop and mobile	
SRS	Contributed significantly to the SRS document: - Drafted Introduction, Product Scope, and Overall Description sections - Defined UI/UX requirements in detail			
Testing	Manual testing contributions: - Create test cases for frontend components - Document test procedures for UI workflows - Test responsive design across multiple devices - Conduct browser compatibility testing			
Real Time			Real-time implementation: - Integrate Socket.IO on frontend - Implement real- time recipe updates - Create notification system for recipe suggestions	

Discuss with Tutor during workshop			Will discuss with tutor in week 8 to get feedback on UI design and frontend architecture	
Leadership			Support team leadership: - Assist project leader with frontend coordination - Provide UI/UX expertise during planning sessions - Help mentor junior team members on frontend tasks	
Tools	Pass	Credit	Distinction	High Distinction
GIT			Will use feature branches for each UI component - Follow structured git workflow - Create separate branches for major features	
Trello			Will maintain well- documented tasks: - Clear naming conventions - Detailed descriptions - Regular updates on progress - Use checklists and labels	
README file		Will contribute to the README: - Frontend setup instructions - UI component documentation - Environment configuration details		

Likith Somashekar

Criteria	Pass -> "can do allocated work with guidance"	Credit -> "performs their role in the Project"	Distinction -> "can see themselves in the team and assist others"	High Distinction - > "can demonstrate excellence"
Core Development			Backend Development: - Implement Node.js backend with RESTful API - Develop MongoDB database models and schemas - Create controllers following MVC architecture - Implement authentication and authorization system - Design efficient database queries	
CRUD			Advanced CRUD operations: - Implement data validation C error handling - Develop rolebased access	
			control (RBAC) -	
			Create bulk operations for recipe database - Implement soft delete functionality	
Design			Backend design: - Create detailed system architecture diagram - Document database schema design - Define API endpoints and data flow	

SRS	Contributed to SRS document: - Developed Specific Requirements (Functional and Non-Functional) - Defined database requirements and constraints		
Testing	Testing contributions: - Create manual test cases for API endpoints - Document testing procedures - Develop input validation tests		
Real Time		Real-time implementation: - Implement Socket.IO for backend - Create broadcasting sockets for multiple users - Develop real-time data synchronization	
Discuss with Tutor during workshop		Will discuss with tutor in week 9 to get feedback on database architecture and API design	
Leadership		Leadership excellence: - Act as Project Leader

Utkarsh Aggarwal

Criteria	Pass -> "can do allocated work with guidance"	Credit -> "performs their role in the Project"	Distinction -> "can see themselves in the team and assist others"	High Distinction - > "can demonstrate excellence"
Core Development	Integrate Admin Portal with the ability to create/edit and modify rules.		Full-Stack Development: - Integrate frontend and backend components - Implement Socket.IO for real- time communication - Create authentication middleware - Set up deployment infrastructure - Develop error handling system across application	
CRUD		CRUD operations: - Implement recipe suggestion algorithm - Create feedback mechanism - Develop user profile management		
Design			System architecture: - Create comprehensive system architecture diagram - Document API endpoints and integration points - Design deployment architecture	
SRS			SRS contributions with research: - Documented External Interfaces, Use Cases, and System Architecture -	

Testing			Researched industry standards and best practices - Compared with similar recipe suggestion systems Advanced testing: - Implement endto-end testing for critical user workflows - Set up automated testing framework - Prepare test coverage report - Document testing	
D 1 T'			methodology	
Real Time Discuss with Tutor during workshop Leadership			Will discuss with tutor twice (weeks 8 and 10) to get feedback on integration architecture and testing approach Support team leadership: - Assist project leader with system integration - Provide full-stack expertise during planning sessions - Help mentor team members on integration challenges - Support end-to-end testing implementation	
Tools	Pass	Credit	Distinction	High Distinction
GIT				Implement release branches - Feature branches aligned with Trello - Manage version control - Set up CI/CD integration

Trello	Well-documented tasks: - Detailed descriptions -
	Regular updates -

		Use of all Trello features - Integration with Git commits	
README file	README contributions: - Complete project documentation - Detailed setup instructions - Testing procedures - Deployment guidelines		

5. Tech Stack

- Currently Using:
 - o HTML5
 - o CSS3
 - JavaScript
 - o Materialize CSS
 - o JQuery
 - o Animate.css
 - o Google Fonts
 - o Material Icon
 - o Node.js
 - o Express.js
 - o MongoDB
 - o Mongoose
 - o The MealDB API
